

LAKE MOHAWK  
PRESERVATION FOUNDATION

Science and Nature Working Together

## Your Support Makes a Difference

Your support is critical to the success of the Lake Mohawk Foundation, providing the difference between funding what is short-term and basic and what is truly needed to protect and preserve the lakes located in the Lake Mohawk Reservation including the headwaters of the Wallkill River Watershed. We ask you to join with us to undertake an exciting and challenging journey to address and solve a number of compelling environmental and lake quality issues based on sound technical and management control initiatives. For your consideration, the Table below addresses four critical questions supporting the need for strong volunteer support and generous donations:

<u>Question</u>	<u>Our Answer</u>
1) <i>What are the compelling needs for the Foundation?</i>	<p>Our needs:</p> <ul style="list-style-type: none"><li>a. Community Education</li><li>b. Building a volunteer / member base</li><li>c. Addressing Critical Water Quality Concerns – reducing nitrates, sediment transport into the lake(s), control of factors influencing blue-green algae formation, control / reduction of a broad range of threatening evasive species, verification and greater use of mechanical means of controlling water quality versus use of chemicals, etc.</li><li>d. Support research efforts by others to develop new innovative and cost effective approaches to achieve desired water quality levels; includes achievement of ever increasing State Water Quality Standards</li></ul>

Your support and financial funding are critically needed.

To discuss volunteer and giving opportunities, please contact one of our officers / Trustees:
